The first RoLSS

The first RoLSS shipped in March to Europe to measure components for the Auto Industry. See a fascinating article on the fuel injector part we measure and other uses of Piezo materials (We use Piezo materials in the OptiGauge as well) See the piezo.

We hope you enjoy this issue of the Lumetrics' Newsletter. We bring you information on technology that is changing the way quality is viewed, not only the medical market but in ophthalmics and industrial uses as well. Call us if you have problems that you need solved.

→ Record Results at MD&M West

Visitors at the MD&M show in Anaheim were enthusiastic with their support for the Lumetrics OptiGauge and its cutting edge applications. We sold our first Rotational Linear Scanning System (RoLSS) to be used in a balloon production setting to a major medical equipment manufacturer who saw the system at the show. We are busy following up with the many requests we've received for testing and followup. See more photos

→ Balloon Measurement

Lumetrics continues its enhancement of RoLSS with the addition of more features and functions. The first release of the pneumatic system is being delivered in April to be used for medical balloon production. This system allows the operator to quickly insert a balloon, inflate it to any pressure and then rotate it as the OptiGauge continuously maps the surface. See a brief video on

loading a balloon
